

What Is The Hair Analysis?

Hair has the advantage of long-term memory. It's a permanent record, like tree rings. A three-inch strand of human hair will give a six-month history of what's going on in the body since head hair grows at a rate of about a half an inch a month.

The hair analysis test is an excellent tool to identify specific chemical toxins within the human body, and vitamin and mineral deficiencies caused by them.

How Does The Analysis Work?

A sample of hair sent to the laboratory for analysis will show levels of potentially toxic elements and levels of essential elements necessary for normal body function. Reference ranges are determined by the type of hair submitted, gender, and age.

The hair analysis provides a screening for physiological excess of toxic elements which, in turn, create deficiencies or mal-distribution of essential elements in the body. Clinical research indicates that hair levels of specific elements, particularly toxic elements such as cadmium, mercury, lead, and arsenic, are highly correlated with pathological disorders. The hair proves to be more indicative of body stores than blood or urine.

How To Get Started?

Getting a hair analysis with Dr. Hull is extremely easy. It is as simple as following Steps One, Two and Three:

- Step 1** Filling out this form with your personal information.
- Step 2** Sending Dr. Hull a sample of your head or pubic hair.
- Step 3** Sending Dr. Hull your payment online, through the mail, or over the phone.

You can print out this form and mail it to Dr. Hull with your hair sample and payment if you prefer not to submit your information via the Internet. Instructions are below on what information is needed to process your analysis, how to send a hair sample, and where to mail your payment.

Please answer the questions to the best of your ability. Dr. Hull will use the proprietary information to interpret your report and to provide specific nutritional recommendations based on your health history and hair analysis results.

Please keep in mind the following information will be kept with the strictest confidentiality and will only be accessible to Dr. Janet Starr Hull as stated in our disclaimer. You can view our disclaimer online by visiting the page below:

How To Submit Your Hair:

- 1** Cut samples of the young hair at the back of the head at the neck area. If there is any concern about chemicals on your head hair, pubic hair samples are commonly submitted for analysis.

Using stainless steel scissors, cut the hair as close to the scalp (or skin) as possible. It is best if small amounts of hair are cut from 5 or 6 areas at the back of the head.
- 2** As each piece of hair is cut from the head, save only 1-inch (2.5 cm) of the hair closest to the scalp (new growth). Cut off and discard the rest.

If your hair is too short to cut, pubic hair can be submitted, or thinning shears may be used to obtain the specimen by placing them next to the scalp.
- 3** 0.25 grams of hair is a sufficient amount of hair to collect. This is equivalent to an approximate **heaping tablespoon**.
- 4** Place the hair in a zip-lock baggie and seal. Mark on the baggie indicating if it's head or pubic hair (send a sufficient amount of hair as more hair is better than too little).
- 5** Send this form including your hair sample and payment to:

Dr. Janet Starr Hull
PO Box 239
Melissa, TX 75454

Payment Information

Payment is accepted at the time the hair analysis is submitted to Dr. Hull before the sample is sent to the lab.

Payment can be made with a personal check or money order mailed to Dr. Hull with your hair sample and the patient information form. Payment can also be submitted online at <http://www.hairanalysisprogram.com> or over the phone through out toll free order placement number 800-897-2556.

The cost for the hair analysis is **\$180.00 USA**. That includes an \$85.00 lab fee and \$95.00 for Dr. Hull's interpretation and nutritional recommendations.
