

# Hair Analysis Case Study

Dear Dr. Hull,

Your hair analysis report showed that I was high in the metals aluminum, mercury, and radioactive uranium, but was low in the minerals magnesium, potassium, and selenium. You also concluded that the small amounts of thorium, a rare but highly radioactive metal, could be contributing to my unique health symptoms.

With your extensive background in environmental science, you quickly identified the source of the radioactive metals: living on military bases throughout my childhood that housed underground nuclear storage facilities. How could I have been living on top of nuclear storage sites without being the wiser? After doing some research, I verified the truth of your hypothesis that I had in fact been exposed to nuclear radiation, and never had a clue!

No medical doctor has been able to trace the roots of my health problems back to their source. Your interpretation of my hair analysis, however, uprooted this source, and provided a base of knowledge from which to recommend the necessary, targeted treatment. I have been following your nutritional advice through consistency of taking the recommended supplements, exercising, and following your detox program to help restore my wellness.

Your insight and wisdom have helped to dissolve fatigue and restore the energy that I thought had been permanently lost. I can't thank you enough for helping me feel whole and well again. I'll do my part to pass along the word, hoping that others can be helped in the same way! Thanks again!

Donna Barb

Donna had an unusual loss of energy and was requiring more and more sleep than normal. Her allergies were getting worse, having gone from seasonal to all year long. She went to doctors and

allergists to no avail. No one knew why this vivacious woman was suddenly wearing down. With no answers provided her by the medical community, Donna sought nutritional counseling and a hair analysis. She finally discovered the answers to her health symptoms - radioactive metals.
